Juliano Daniel Marcelino, M.Sc.
Freelance Systems Analyst

Profile

I started my career in IT infrastructure and customer support, since then adding value in almost 30 years of IT Mgmt/Gov, consulting and teaching, across worldwide companies experience.

In the last years I've been increasing hard skills both in software development and technologies (Flutter, Python, JS, Docker, Arch Linux and other distros), as well in agile methodologies and lean IT. On the other hand, the main soft skills are ethics, organization, QC-Story, teamwork, communication, negotiation and flexibility.

Currently I have been focusing on software development and leaving teaching aside, so now the focus is tech and code.

Experience

02/2013 - ongoing Uniasselvi Group

In postgraduate and undergraduate, taught both person and distance learning, as well as orientation of course completion work, in education, engineering, administration, system analysis correlative disciplines.

Life Philosophy

I help people (and companies) to solve problems. There is no one so expert with nothing to learn, and there no one so poor with nothing to teach.
